Highest Priority Communities

The Healthcare Access Priority Model identified these three communities as the highest priorities for further investigation based on healthcare supply relative to community need.

Although all three communities ranked among the highest priorities, each illustrates a different healthcare access challenge.

98312 (West Bremerton)

Large population with relatively limited provider availability

- Population: 32,288
- 1.86 providers per 10k
- 11.4% poverty rate

98359 (Olalla)

No local healthcare facilities identified

- Population: 4,889
- 0 providers
- 12.3% poverty rate

98637 (Port Orchard)

Growing residential community with no healthcare facilities identified despite serving more than 31,000 residents.

- Population: 31,186
- 0 providers
- 6.9% poverty rate

Recommendation: Further evaluate healthcare access by assessing travel time, provider capacity, transportation access, and other local barriers.
